With the crimping pliers, you can make perfect rigs and booms every time. In contrast to knots, crimping offers a higher breaking strength of the line, which ensures safer and more reliable connections. The precisely manufactured crimping slots measure 0.6mm, 0.7mm and 0.8mm and allow you to make a perfect crimp every time. They are suitable for different

Product information

materials and guarantee that you can produce top quality ronnie booms and chod rigs. Our crimping pliers are made from super strong carbon steel and are PTFE coated for ease of use and corrosion protection - they are built to last. The side cutter is ideal for quickly preparing the boom material and cutting it off after crimping, saving you time and effort. The comfortable rubber handles provide a secure grip and make handling easier. The compact design fits comfortably in most tackle boxes.

The crimping pliers come with two different crimp sizes: 0.6mm and 0.7mm. Choose the crimp size that best suits the diameter of your boom or leader material for optimum results. The crimps can be used with bristle filament, monofilament and fluorocarbon materials. Please check your crimped connections with a puller tool for safety before casting.

Features:

- easy production of rigs and booms
- Crimping ensures higher line breaking strength compared to knots
- Ideal for modern rig variations such as Ronnie Booms and Chod Rigs
- Precision-manufactured crimp slots in 0.6mm, 0.7mm and 0.8mm for perfect crimps
- Made from super-strong carbon steel
- PTFE coating for easy application and corrosion protection
- Side cutter for quick preparation of the crimping material and for cutting after crimping
- Comfortable rubber handles for a secure grip
- compact size, fits in most tackle boxes
- Supplied with two crimping sleeve sizes: 10 x 0.6mm and 10 x 0.7mm
