4 Stk. in stock

After the huge success of the original Gravity carp rods, the experts at Sonik have created a true masterpiece with the NEW Gravity! After months of testing and precise design processes, Sonik presents a rod designed for extreme casting distances. The high modulus carbon blank with low resin content provides an extra powerful casting action and features ultra-fast tip recovery!

In addition, the handle has been equipped with an anti-torsion core, which provides more casting power without compromising the action of the rod blank. With the ultra-lightweight Seaguide TDG PVD coated DL black guides, casting really takes off - in the right hands there are no limits! The classy, semi-matt Armored Carbon finish and the slim handle made of Japanese shrink tubing put the Gravity in a league of its own.

Other features include the seamless Weld Anti-Frap tip ring and the DPS 17mm reel seat, which perfectly complements most modern big pit reels. With the exception of the two 10ft models, all feature 50mm guides. There are two 10ft models at 3lbs-3.5lbs, three 12ft models at 3lbs, 3.25lbs and 3.5lbs and a 13ft model at 3.75lbs for those aiming for extreme

Product information

distances. A special 12ft Spod/Marker model is also available.

Features:
