Mono meets fluorocarbon - the best of 2 worlds!

The WATERCRAFT FLURO LINE V2 Crystal is a state-of-the-art fluorocarbon-mono hybrid that has been specially developed for demanding anglers for whom camouflage under water is important. With its unique construction and first-class

Product information

properties, it is the perfect choice for a wide range of applications.

It has a flexible **mono core**, which is welded with multiple strands and ensures exceptional stability and abrasion resistance. In addition, it is coated with a **fluorocarbon coating** that makes it invisible and highly sinking. It thus combines the abrasion resistance and breaking strain of a mono and the camouflage and good sinking properties of a fluorocarbon line that is nevertheless supple - a fusion of the advantages of mono & fluorocarbon! This makes it perfect for laying out with a boat as well as for casting.

The line is almost invisible under water, even in extremely clear gravel pits, and the knot strength and linear breaking strain are outstanding!

Thanks to the special production method, this line almost completely minimizes the memory effect. It retains its shape and performance, even after prolonged use.

TOP features:

- **maximum abrasion resistance**
- **high breaking strain and knot strength**
- **invisible under water**
- **almost no memory effect**
- **fast sinking**

Quality without compromise: This premium line sets new standards. Made in Europe!
