from 138,59 EUR / Stk.

incl. 20% VAT plus Shipping

Delivery **Thu 05. Nov - Fri 06. Nov 2026**

2 Stk. in stock

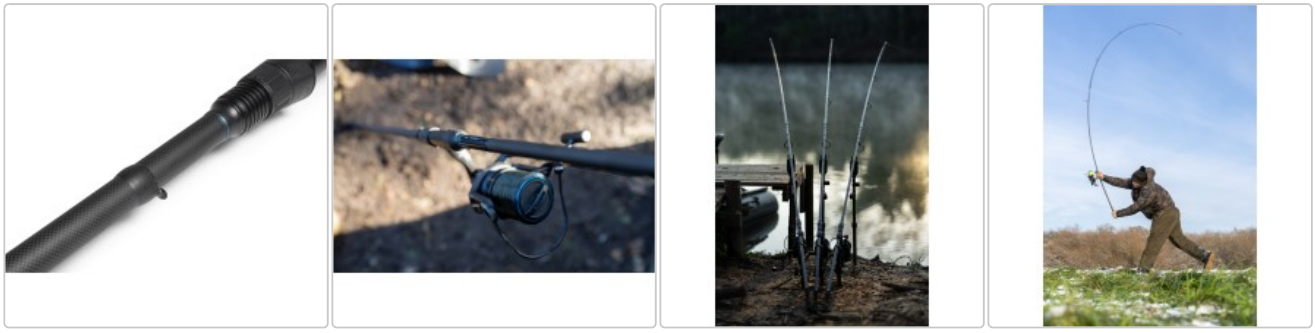

Product information

Extreme widths without compromise

The Air Force rods represent the pinnacle of modern rod technology, specially developed for casting monsters and competition anglers. These rods are the answer to the demand for extremely long distances and precise casting accuracy. They are ideal when a lack of meters makes the difference between success and failure and can take baited rigs or spots to previously unattainable distances.

Air Force F20

Developed as true casting tools, the F20 rod patterns offer impressive casting distances and an excellent drilling action. The first series of these rods supplied to European and UK casting specialists caused astonishment and were mistaken for the exclusive F40 models due to their performance.

Which Air Force rod?

- 12ft 3.5lb: Ideal for most modern carp anglers. Allows extreme casts without sacrificing action - ideal for multi-range fishing. Optimum casting weight: 2.5-4.5oz.
- 12ft 3.75lb: A reinforced blank for heavier leads or PVA bags. Offers maximum casting distances without having to switch to a 13ft rod. Optimum casting weight: 3-5oz.
- 12ft 5lb Spod & Marker: Uses the same high quality Japanese carbon blanks. Strong and powerful, ideal for large casting weights.
- 13ft 3.5lb: Offers tremendous rod tip speed and is ideal for experienced casters looking for a distance advantage without sacrificing safety in the fight. Optimum casting weight: 2.5-4oz.
- 13ft 3.75lb: A casting distance monster for extra meters. The long, reinforced blank achieves high speeds even with heavy casting weights. Optimum casting weight: 3-5oz.
- 13ft 5lb Spod & Marker: An elite tool for markers and spods, perfect for precise feed delivery. The super light blank reduces fatigue.
