from 12,99 EUR / Stk.

incl. 20% VAT plus Shipping

Delivery **Thu 05. Nov - Fri 06. Nov 2026**

More than 10 Stk. in stock

Design/type: Wafter

Discover the incredible efficiency of our wafters, available in two mixed sizes, 15mm/20mm and 25mm/30mm, and supplied in a tin. Our wafters are balanced and are characterized by a lower density than conventional boilies, which makes them enormously effective on the rig.

Each variety of our wafters is made with the respective High Range boilie mix. Furthermore, our wafters are enriched with our unique DNA food stimulator, which unfolds its irresistible effect immediately after contact with water and attracts the fish.

Although they work perfectly in water, our wafters are amazingly stable. They prove their worth even under difficult conditions, such as in waters with a high population of white fish. The larger versions in particular are ideal for this.

Thanks to the added attraction, our wafters are particularly selective and attract large carp.

Product information

Specially developed for fishing in dredged and natural lakes, the large wafters allow you to fish with eye-catching yet lighter lures. This huge advantage can definitely make the difference.
