Cralusso Float Adaptors

Art.Nr.: 53638 / manufacturer: Cralusso

from 1,43 EUR / PCE

incl. 20% VAT plus Shipping

Delivery **Thu 05. Nov - Fri 06. Nov 2026**

More than 10 PCE in stock

The Cralusso Float Adaptors offer a simple and efficient method of attaching floats to the fishing line and replace the conventional attachment with silicone tubes. These small adapters make it easier to change floats without the hassle of threading through silicone tubes, tearing them or other difficulties when changing.

Application:

Thread the line through the thin metal thread and then slide the rubber float holder onto the line.
Then insert the lower handle of the float into the adapter and check that everything is secure.
The float can then be fixed easily and securely and the leader can be adjusted.
These adapters are particularly useful when used on fly rods with sinking line in windy conditions, as the line can sink more easily and the rig drifts more slowly. They reduce the risk of line tangles and allow for more efficient bites, as the body of the float tilts out of the water during a bite and thus offers no resistance.

Features:

Product information

- Also simplifies the precise and gentle attachment of lead shot to the line.
- Ideal hold is achieved by adapters that are 0.1-0.3mm thinner than the handle of the float.
- Available in three sizes:
    - **0.5mm** adapter for floats with 0.6-0.8mm handle
    - **0.7mm** adapter for floats with 0.8-1.0mm handle
    - **0.9mm** adapter for floats with 1.0-1.2mm handle
