incl. 20% VAT incl. Shipping

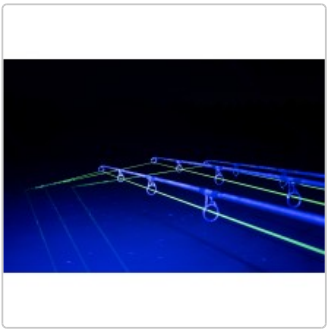

Delivery **Fri 06. Nov - Mon 09. Nov 2026**

3 Stk. in stock

Product information

Line type: Braided

The Nash Baseline Braid is revolutionizing the braided mainline market with innovative features previously unheard of in the carp fishing sector.

Features:

- Eight plus one strand construction with a denser, sinking core of fibers surrounded by woven high quality Dyneema
- Thin braided line with round profile for easy casting and spooling
- Fast sinking and inconspicuous settling to the bottom for improved camouflage
- UV Yellow reflective strands in ultraviolet light for instant visibility of line position and direction
- Maximum visibility during the day and can be illuminated in the dark with a UV headlamp
- Reduces the risk of line entanglement in propellers or boat keels for boat users
- Helpful for rigs in close proximity and in complex situations with multiple lines
- Available in 600m and 1200m spools for flexibility in different fishing setups

Note: The reflective properties of Baseline Braid UV Yellow may diminish over time. It is recommended to turn the line over on the reel spool to restore maximum reflective performance.
