Are you looking for a hookbait that is not only **attractive** but also **selective**?

Product information

The new Watercraft DNA Bait Smoke wafters are just the thing! Thanks to the **innovative Baitsmoke coating**, which is perfectly matched to the respective species and enriched with our proven **DNA Feedstim Baitsoke** , they set new standards.

As soon as the wafter comes into contact with water, the Baitsmoke coating is activated. The **color is distributed in the water** and simultaneously releases **strong feeding signals**. Under the **dissolving Baitsmoke layer**, the **original color of the wafter** is retained, while the **attracting effect** is maximized by the **DNA food stimulator**. These lures have proven to be **the ultimate fishing machines** - even in **cold water** and **difficult conditions!**

Thanks to an **elaborate manufacturing process** , the wafters are perfectly balanced and remain stable **on the rig for** at least **48 hours**. They are ideal for various presentations and can be used in a variety of ways.

Handmade in Austria!

Features:

- Attractive and selective hookbait
- Coated with DNA Feedstim Baitsoke
- Elaborate manufacturing process for perfect balance
- The original color is retained under the baitsmoke
- Lasts at least 48 hours on the rig
- Particularly effective even in cold water
