More than 10 PCE in stock

These pellets are very attractive to fish as they have an easily digestible composition. They are suitable as year-round food and dissolve quickly even in cold water temperatures. The high-quality ingredients Squid and Birdy make the pellets particularly tempting and the pink color ensures an eye-catching appearance.

Product information

As soon as the pellets have been in the water for a few minutes, they form an attractive and colorful cloud that also releases small particles. Depending on the pellet size and water temperature, they dissolve quickly. These pellets are a good choice for feeding campaigns with Spomb & Co, as they sink slowly and continuously send out feeding signals. This means they are also ideal for fishing with zig rigs.

They are also perfect for use with boosters or soaks to enhance the lure effect. They are extremely versatile and can be mixed well with other types of food such as Boilies and particles. Spombs and rockets can be filled with them, or they can be added to Groß feed campaigns.

Overall, these pellets are an excellent choice for activating your feeding area and attracting fish.
