that!
For over 2 years, we optimized countless prototypes and variants in tough practical tests, competitions and intensive casting training sessions - until we had the **perfect casting line** in our hands.

Why the Watercraft Ultraslick Shockleader?
 Extremely smooth surface: This shock leader glides effortlessly through the guides of your rod - maximum distance with minimum effort!
 Maximum abrasion resistance: Whether it's violent casts or nasty obstacles under water, with this line you can withstand anything!
 Sinking & inconspicuous: Lays flat and almost invisible at the bottom of the water without scaring fish away.
 O **utstanding knot strength:** Extremely reliable connection to the main line and rig, even under high loads.

Choose the right variant for your area of use:
 18kg / 0.28mm: Small knots, especially for extreme long distance casting and long range fishing. Also ideal for marker rods.
 25kg / 0.30mm: The all-rounder! Universal version for high casting weights (130-160g), ideal for extreme long distance casting with hard rods, markers or spodden with smaller feeder rockets. Super abrasion-resistant against shells and wood.
32kg / 0.35mm: The heavy version for large spods and difficult spots with mussel beds and dead wood - it can't be kept down!
