Product information

Skeater Zero-X Fluorocarbon

Art.Nr.: 59164 / manufacturer: Skeater

from 4,99 EUR / PCE

incl. 20% VAT plus Shipping

Delivery **Fri 06. Nov - Mon 09. Nov 2026**

10 PCE in stock

Skeater Zero-X Fluorocarbon is a leader material made from 100% premium fluorocarbon. With a refractive index almost identical to water, it is almost invisible underwater and therefore particularly suitable for clear water and fine presentations.

Product information

It combines low visibility with high abrasion resistance and offers the right balance of stiffness and flexibility. The material is hard but at the same time semi-elastic, allowing lures to run naturally and rigs to be presented cleanly. Even in larger diameters, Zero-X retains its shape and at the same time provides the necessary strength to land even large predators safely.

Applications range from fine perch and zander fishing with light rigs to heavy rigs for pike and catfish. Available in various diameters, Zero-X Fluorocarbon covers the entire predatory fish spectrum.

Properties:

- 100% fluorocarbon
- Almost invisible under water
- High abrasion resistance, even on obstacles and stones
- Hard and at the same time semi-elastic for natural bait presentation
- High load-bearing capacity and reliability during the fight
- Suitable for many predatory fish species and methods
- Ideal for drop shot, bait finesse, single hook rigs, bait leaders and pike rigs
