SMART FISH Deep See Pro4

With the Deep See Pro4, you get direct and immediate insights into what lies beneath the water’s surface. The compact underwater camera transmits a clear live image while simultaneously displaying water temperature and depth. This allows

Product information

you to see structures, the seabed, plants, obstacles, or fish in real time.
What’s really cool is that the camera (when out of the water) measures and displays air pressure. That’s an additional technical highlight.
The product holds international certifications including CE, FCC, RoHS, and UKCA, guaranteeing quality and safety.

The camera provides valuable information, especially when searching for new spots, casting from a boat, or checking rigs. You can immediately see what the bottom looks like and how your bait is presented.

The 160° ultra-wide-angle lens covers a large area underwater. Combined with the HD CMOS sensor, contours, vegetation, and bottom structure are clearly displayed. Four integrated image modes automatically adjust the display to different water conditions—from clear water to poor visibility.

For darker areas, the camera features powerful infrared LEDs. The brightness can be adjusted, resulting in a clearly visible image even in low light.

In addition to the camera image, the system displays additional information directly on the monitor. Water temperature and depth are displayed continuously. This data helps provide anglers with valuable insights.

The built-in 4000mAh battery provides a continuous runtime of approximately 8 to 10 hours. The rugged 30m camera cable withstands heavy use and allows for deployment even at greater depths.

The 4.3-inch IPS display ensures a clear image. (A removable sun visor improves visibility in bright daylight.)

Thanks to the integrated 1/4-inch threaded mounts, the system can be easily attached to brackets, arms, or tripods.

Features:

- Underwater camera with live image transmission
- Display of water temperature and depth
- Air pressure display
- 160° ultra-wide-angle camera for a wide field of view
- HD CMOS sensor for clear image quality
- Four image modes for different water conditions
- Infrared night vision with adjustable brightness
- 4.3-inch IPS display with high brightness
- 4000mAh battery with approx. 8–10 hours of runtime
- Durable 30m camera cable
- 1/4-inch threaded mounts for brackets
- Power supply and charging via USB-C

Included:

- SMART FISH Deep See Pro4 Monitor
- Underwater camera with 30m cable
- Removable sun visor
- USB-C charging cable
- User manual
