Watercraft DNA Enzyme-Activated Smoke Wafter 16/20mm Sample Pack
Perfect for trying out the entire range and finding out which variety works best in your own waters.

Thanks to the **innovative Baitsmoke coating**, which is perfectly tailored to each variety and enriched with our proven **DNA Feedstim Baitsmoke**, the Watercraft DNA Bait Smoke Wafters set new standards.

As soon as the wafter comes into contact with water, the Baitsmoke layer activates. The **color disperses in the water** while simultaneously releasing **strong feeding signals**. Beneath the **dissolving Baitsmoke layer**, the **wafter's original color** remains intact, while the **DNA feeding stimulator** maximizes its **attractiveness**. These lures have proven themselves to be **ultimate catch machines**—even in cold water and difficult conditions!

Thanks to a **sophisticated manufacturing process,** the Wafters are perfectly balanced and remain stable **on the rig** for at least **48 hours**. They are ideal for various presentations and are highly versatile.

Product information
