shape with an extra wide bend and a curved, inwardly bent point makes this hook ideal for KD rigs, but also for simple knotless knots. This shape means more hooked and more landed fish!

This hook is a development by Tom Dove. He wanted to combine the aggressive shape of the Kurv Shank with an extremely large gap to get the maximum of good hooking properties. The eye is slightly bent inwards and because the crane has a restricted point, it also holds when it is seated.

This hook grips so well that it is best fished with a simple knotless knot. Tom initially designed it with his beloved Muzza Rig (KD) in mind, but the Krank is suitable for everything from bottom baits to Snowmans. You will hook and land more fish with this hook!
