series our high-performance Helicore blank made from T1100 carbon fibers. A modified version of the Fishscale technology familiar from the AIR Spin RS-2 models ensures an inspiring surface finish. The handle area above the FUJI VSS reel seat is also made of lightweight and robust 3K carbon. The action of the TiBoron RS-3 was deliberately designed to be a little tighter than before in order to meet the demands of modern soft lure fishing. And, of course, the rods are also ideal for all those who want to catch large pike and zander with plugs, spoons, spinners and the like.
