from 30,79 EUR / PCE

incl. 20% VAT plus Shipping

Delivery **Thu 05. Nov - Fri 06. Nov 2026**

1 PCE in stock

The "Push and Twist" locking mechanism with the MMCX bayonet connection creates a seamless connection to the bite indicator. When the Night Glo function is activated, the Night Glo Bobbins and Swing Arms respond with pulsing light whenever the bite indicator LED lights up.

The Night Glo Swing Arm is a complete bite indicator system that allows a seamless change between traditional arm indicators and the preload mechanism of the well-known Wasp bite indicators.

A twist lock mechanism offers four settings. From a freely adjustable weight to a three-stage spring tensioning mechanism for effective fall bite detection when fishing at long distances.

The smartest optical bite alarms from Nash, the Night Glo range is the perfect complement to the Siren R4 alarms.

- freely adjustable weight on the arm
- 3 additional settings with different preload
- Available in matching colors to all selectable LED colors of the bite indicator. The pulsating light reflects every action on the R4. Also available in black with white LED.
- Magnetic quick release system for easy installation

Product information

- Push Twist cable connection to the power output of the R4
- Unique magnetic line clip only releases the line when the rod is lifted
