from 10,49 EUR / PCE

incl. 20% VAT plus Shipping

Delivery **Thu 05. Nov - Fri 06. Nov 2026**

2 PCE in stock

The fastest sinking and heaviest braid on the market to date. Extra soft for optimum rig presentation combined with unsurpassed abrasion resistance and optimum camouflage properties.

Product information

Exclusively developed by Kevin Nash, Armourlink uses sintered HD Plus barrels in conjunction with Dyneema. The result is a soft leader that sinks like a stone - three times faster than fluorocarbon.

Extremely abrasion resistant and the first choice for renowned carp anglers worldwide. The heaviest and best sinking braided leader material currently available on the market. The nature of the braid makes it extremely difficult for the carp to see, yet it offers the ultimate in abrasion resistance.

Developed by Kevin Nash, Armourlink consists of extremely resistant HD plus fibers combined with Dyneema. Thanks to this combination, this braid sinks three times faster than fluorocarbon - produced in Europe.

Available in 20 meter spools in 15, 20, 25, 35lb in weed, gravel and silt.
