from 34,99 EUR / PCE

incl. 20% VAT plus Shipping

 Delivery **Mon 19. Oct - Tue 20. Oct 2026**

More than 10 PCE in stock

The Fluro Cast is a high performance mono line of the top class "Made by Asso".

After the overwhelming success of the "Orange", our top seller is now also available in green! :)

Product information

The base of this line contains a new type of copolymer mixture, which is coated with a fluro-carbon coating. The line is extremely smooth and therefore offers brilliant casting properties. **In our tests, our casting experts set a whole series of new records!** The **green** color makes it highly visible at night and a real eye-catcher on the reel. It is extremely abrasion-resistant, low-stretch and has virtually no memory effect. The thicker diameters in particular are also perfect for laying out by boat and in waters with many obstacles thanks to their high abrasion resistance.

Currently the best and highest quality line you can put on your reels! Properties:

- high load capacity values (linear load capacity)
- ultra-smooth surface
- very good visibility
- extremely abrasion resistant
- low elongation
- brilliant casting properties

Diameter guide:

0.24mm - 0.28mm - perfect for casting and when you want to go really far

0.30mm - 0.35mm - perfect all-round strength for normal casting distances and for casting out with a boat

0.40mm - perfect for casting with a boat, for rivers and obstructed waters

For us, both Watercraft Fluro lines are currently the benchmark in the mono line sector. This is quality that is second to none. Made in Europe!
